

Drone Post-mission SOP (RFO)

- Land at pre-agreed concealed location; secure aircraft immediately
- Remove SD cards, store in encrypted/labelled container; avoid field exposure
- Back up raw media to encrypted device and checksum/verify
- Log mission metadata: start/end time, coordinates, sensor settings, anomalies
- Sanitize sensitive images (mask precise coordinates/species locations) before sharing
- Clean equipment (remove debris, dry; follow LiPo battery cool-down) and store in Pelican case with desiccant
- Update operations journal and report incidents to CCOPS
- Schedule maintenance if anomalies detected; charge batteries to storage state per protocol
